

# *Ninth International Training Course on* **Wind Turbine Technology and Applications**

5<sup>th</sup> to 27<sup>th</sup> September 2012

## Introduction

**W**ind power is being adapted the world over as the most efficient power generation source that does not cause greenhouse emissions. With the raising concerns on climate change, countries are under pressure to turn renewable energy sources and reduce CO<sub>2</sub> emissions. Amongst RE sources, Wind energy proved more successful energy option next to hydro and about 239 GW has been installed worldwide. Earth's commercially viable wind power potential is estimated 72 TW which is five times more than world's total energy demand. With such a huge potential, only very few countries are really using wind power. USA, some of the European countries and Asian countries China and India are using wind energy at a large scale. Wind energy has been least used in African continent, where only very few countries like Egypt, Morocco, Tunisia, South Africa etc. uses Wind energy for power generation. Deficit of skilled human resource has been one of the main barriers to hinder wind energy and other renewable energy diffusion.

Centre for Wind Energy Technology (C-WET), Chennai, India being first of its kind institution in Asia has responsibilities to take up this issue. C-WET has contributed for diffusion of wind energy as one of the primary energy source in India. Now India, over the years has been a trend-setting nation with regard to Wind Power Utilization. Decades of concentrated efforts have

started to yield gratifying results and today, Wind power contributes about 8 % of the total energy mix and stands fifth in terms of installed wind power capacity worldwide. With this vast experience, it is worth effort that India can incorporate lessons learnt from her own experience and foster elsewhere in the globe. It is in this context, a four week Ninth International Training Course is being organized by C-WET. To highlight, C-WET has so far organized 8 international training courses and trained more than 150 professionals from 46 countries and has also organized eleven national training courses and two special international / national training courses.

## Objective

- The prime objective is to transfer knowledge and special skills to the international participants
- Build skilled human resource so that there will be advancement of wind energy in the participants' country
- To do extensive research and evolve innovative strategies
- Provide an invaluable platform for exchange of professional and cultural experiences among diverse participants from different parts of the globe
- Leverage the research that continues to shape this rapidly evolving discipline

## Training Methodology

The lectures include exercises and case studies to stimulate active participation and dialogue. Hands-on working wind energy equipments and excursions to operating wind farms and wind turbine manufacturing facilities are also scheduled to enhance transfer of knowledge.

## Resource Persons

The resource persons will be C-WET Scientists, industry professionals, academicians and other national experts who have significantly contributed for wind energy development.

## Course Syllabus

The course content for the training is a carefully thought out syllabus with specific subject experts giving lectures and going through the specific case studies such that at the end of the day considerable useful knowledge transfer is perceived.

The training addresses the following aspects:

- Wind energy conversion technology and power generation
- Assembly / design of wind turbine
- Wind turbine components and performance characteristics
- Wind turbine technology developments
- Wind resource assessment and techniques
- Planning including design of wind farms
- Cost benefit analysis of wind energy projects
- Installation and commissioning of wind farms
- Post installation activities - Grid integration
- O & M aspects of wind farms
- Testing & Certification of wind turbines

- Small wind turbine and hybrid systems
- Indian government policies, schemes and legal frameworks
- Wind energy developments in India
- Human Resource Development aspects of wind energy
- CDM related to wind energy development

Additional lectures at wind farms and manufacturing facility visits would be organized during the course to give a complete picture of the know-how and how to go about setting up a coordinated wind energy programme at a national level.

## Targeted Participants

The course will be useful for anyone involved in wind energy industry, or those looking for an introduction. Person from the following fields will find this course very relevant.

- Power Industry
- Utilities
- Project Developers / Managers
- Consultants
- NGOs
- Academic and R&D institutions
- Suppliers and Distributors
- Government Organization
- Media

## Eligibility

- Applicant should be from any one of the ITEC / SCAAP countries  
(Find the list of ITEC / SCAAP countries in <http://itec.mea.gov.in>)
- Degree / Diploma in Engineering / Science with good knowledge in English
- Age between 25 - 45 Years
- Relevant experience in wind energy is preferred

## Course Fee

The course is completely free and sponsored by Ministry of External Affairs (MEA), Government of India. The Air travel from respective participant's country to Chennai, India and return, local travel, accommodation, living allowance, food and book allowance are taken care as part of the course. Accommodation provided will be of international standards.

## Reason to Attend

The course will offer a good foundation on the principles of engineering behind wind energy technology and power generation & distribution along with financial viability and entrepreneur opportunities. The course would facilitate an invaluable forum for dialogue and open exchange of views and experiences with Indian Scientists and professionals. The course would give a picture of complete know-how and pave the way to go about setting up a financially viable wind farm project.

## Venue

The venue for the course will be the Conference Hall of C-WET, Chennai, India.

## How to Apply?

Application should be forwarded through the India embassy / High Commission at the respective country. Details regarding Indian Embassy / High Commission in your country can be found at <http://itec.mea.gov.in>. Upon selection, the Embassy / High Commission of India will inform the Nodal / Designated Department / Agency of the nominating country and the candidate.

## Organized by

Centre for Wind Energy Technology (C-WET)  
Chennai, India

## Sponsored by

Ministry of External Affairs (MEA)  
Government of India, New Delhi

## Supported by

Ministry of New and Renewable Energy  
Government of India, New Delhi

## ABOUT C-WET

The Centre for Wind Energy Technology shortly known as C-WET is an autonomous R&D institution established at Chennai in 1998 by the Ministry of New and Renewable Energy (MNRE), Government of India. It is a young organization with highly experienced professionals with expertise in all related disciplines of wind energy sector. This unique combination makes it a forward looking and practical organization that will take the next logical steps towards advancing wind technology in the right direction. With its open approach to all wind energy related science and technology, C-WET assures assistance from resource assessment to project implementation. As an integral part of C-WET, a world class Wind Turbine Research Station (WTRS) is located at Kayathar in Thoothukudi District, Tamil Nadu. Perhaps, C-WET is the only Testing and certifying agency in the country.

C-WET has the responsibility to provide complete scientific and technical backing to all stakeholders in the field of wind energy and has stated its commitment through its quality policy.

C-WET is committed to achieve customer satisfaction, loyalty and confidence by providing credible, prompt and complete solutions of international quality to all the stakeholders in the wind energy sector.

C-WET, strives to be technical focal point of excellence for the present and future. C-WET shall stay at the forefront of Wind Turbine Technology application by continuously improving its expertise.

**C-WET**
